W3 PRACTICE TEST – Sample

- **Only the provided Dart cheat sheet is allowed**
- **Moodle + SEB exam**
- **The code does not need to compile**

How to start?

✓ Just start the test on CADT LMS, with the SEB (Safe Exam Browser)

XX – Hospital Patients

Create the classes and methods needed for a hospital patient system.

💡 Your code must include the needed classes, attributes, constructors and methods.

💡 A patient is **immutable**.

1. Patient

A patient has:

- **Patient ID** (ex: “P001”)
- **Name**
- **Age**
- **Urgent**: yes or no. If not given, it is **no**.

2. Hospital

A hospital manages a list of patients. It must be able to give:

- Urgent patients

```
List<Patient> getUrgentPatients()
```

- Urgent patients aged 60 or more

```
List<Patient> getUrgentPatientsFrom60()
```

3. Test

ID	Name	Age	Urgent
P001	Dara	70	yes
P002	Sophea	8	(not given)
P003	Malis	55	yes
P004	Rith	65	(not given)

Write a main() that prints:

Search	Expected result
Urgent patients	Dara, Malis
Urgent patients aged 60 or more	Dara
